**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1-10 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The primary reason for allowance of the claims is the inclusion of the requirement that the filtering means of the detection arrangement includes generating offset compensating values from at least two images with mutually divergent displacements. None of the prior art specifically discloses this filtering means, however, prior art references such as Kancler (US Patent 5,838,813) disclose image compensation for interdetector errors including the use of a high pass filter, but does not disclose the specific offset compensation from at least two images with mutually divergent displacements.

Further, none of the prior art of record specifically discloses a physical displacement device positioned between the imaging means and the array. Although many references such as Kancler disclose physical movement of the detector system to take offset compensation measurements, none of the prior art of record discloses using a rotatable plate to displace the image onto the detector.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. US Patent 5,838,813- this reference discloses an image reconstruction method including detector element calibration.

b. US Patent 6,307,200- this reference discloses an IR sensor apparatus with an offset compensator.
